Terms & Conditions: [Hydrospares | Terms and Conditions | Hydrospares](#)

IMPORTANT

F-Gas Certified Engineers

The IceFall™ Ice Bath contains a sealed refrigeration system using fluorinated refrigerants (F-Gases). Under the Fluorinated Greenhouse Gases Regulations 2015 (SI 2015/310), certain work involving refrigeration systems may only be carried out by appropriately qualified personnel.

To protect both your warranty and the integrity of the refrigeration system:

- All installation, servicing, maintenance, repairs, refrigerant handling and decommissioning involving the refrigeration system must only be carried out by an F-Gas certified engineer.
- Any work undertaken by an individual or company that does not hold the appropriate F-Gas certification may invalidate the manufacturer's warranty.
- Customers must not attempt to open, modify or repair the refrigeration system themselves.
- The use of unauthorised technicians, non-approved replacement parts or modifications to the refrigeration system may result in the rejection of future warranty claims where they have contributed to the fault.

F-Gases are regulated due to their environmental impact if released into the atmosphere. The legal requirements are set out under the Fluorinated Greenhouse Gases Regulations 2015, which govern the installation, servicing, maintenance, repair and decommissioning of equipment containing fluorinated refrigerants within the United Kingdom.

Hydrospares (Isell Ltd) and the manufacturer reserve the right to request evidence that any refrigeration work has been carried out by an appropriately F-Gas certified engineer when assessing a warranty claim.
